Actions Shares. When the Junos OS instantiates this dynamic IP profile, the resulting [class-of-service traffic-control-profile] section is merged with the existing dynamic interface configuration. If an attribute appears more than once in the check list, this means that any one of the values is valid. Whynotshare! Another way to validate services is to examine the routing table. Create a role assignment rule based on the user role to which the captive portal access rule is assigned. When the captive portal profile is associated to an SSID, it is used before user authentication. ClicktheSecuritytabandselectasplashpageprofile.Enterprise,Personal check list is a set of attributes that must accompany the authentication request before the request can be accepted. You can think of it as a configuration template where you can have multiple profiles for different customer scenarios.
