Can PDSI inform extreme precipitation? Abstract: Understanding the relationship between low frequency variations in large-scale atmospheric circulation driven by the oceans and high latitude hydro-climatic variability at regional scales is important to assess the projections of climate change in these regions, and for designing measures for climate change adaptation. CWC projects featured in Time And Policy: Decision-Making Under Uncertainty (Drought and Water Crises). ContributorslookatRiskManagementriskmanagementinactionandhowendus Our findings suggest that although districts may not yet be in tune with the latest performance management trends, they are making efforts to engage citizens in other ways. Research on long-term weather data done by the Climate System Analysis Group at the University of Cape Town determined that the low rainfall between the years and was a very rare and extreme event.
