But if after learning one maze, the rat is given other tasks and is brought back to the original maze a year later, it will have a hard time remembering it, because the hippocampus scratch board has been mostly wiped of the memory so as to free itself up for new memories. People alive today could witness the moment when biotechnology finally frees the human lifespan from the will of nature and hands it over to the will of each individual.

You could get the enjoyment of eating like shit without actually putting shit  
Delicate electronics tend to not do well inside a jello ball.  
Being more connected to each other means a lot of good  
things—like empathy going up as a result of more exposure to  
all kinds of people—but it also means a lot of bad things.  
They pass through the door, entering Wonderland. The hat is battered and old,  
closes her hand on Mary Margaret's. For George Washington, a  
DPU was a couple hundred years, which is outrageously short in  
the scheme of human history.
