Read our safe buying advice. Lord Howe Woodhen Endemic to Lord Howe Island off the Australian coast, the Lord Howe woodhen *Gallirallus sylvestris* is a small, olive brown bird that lives in sub-tropical forests, feeding on worms, crustaceans, fruit and occasionally taking eggs from shearwaters and petrels. They catch millions of small rodents and birds each year - and it is not fair to you. You can find out if there is a wildlife rehabilitator or rehabilitation center in your area. These forces raising the bird are called LIFT, which makes the bird go up! These birds are prey of dogs, cats and ferrets while stoats and rats are also known. They are silent, they make low booming sounds during the mating season. It looks similar to its cousins except that its wings are about a third of the size required for flight in proportion to its body.
